Project Progress Interaction Log Sheet

Academic Year: 2022 Semester: 8th Visit No: 1 Date of Visit:

Project Title: Dhoom Car Racing

Student Name(s): Aakash Rana Magar, Ayush Tamrakar, Roshan Thapa

Student ID(s):

Student–Supervisor Meeting Log (Minimum 5 interactions are required):

Completed Tasks/ Achievement	Issues/ challenges	Next Week plan
1. Set up the Unity project environment and installed required packages (Photon PUN2, Firebase SDK, TextMesh Pro, SlimUI). 2. Imported and configured 3D car models (Car_1 through Car_55) with LOD (Level of Detail) variants and interior models. 3. Implemented basic car physics using Unity WheelColliders with 4-wheel setup (front-left, front-right, rear-left, rear-right). 4. Created the main menu UI with navigation to Single Player, Multiplayer, Garage, and Profile sections. 5. Designed and implemented the scene flow: MainMenu -> MultiplayerMenu -> Joining -> Lobby -> TrackSelection -> Race Tracks. 6. Set up GameSession singleton for persisting game state (selected car, track, room code, lap count) across scenes. 7. Implemented scene transitions with fade-in/fade-out animation using CanvasGroup alpha interpolation.	1. Difficulty in tuning WheelCollider parameters for realistic yet fun arcade-style driving feel. 2. Scene management complexity with DontDestroyOnLoad singletons persisting across scene loads. 3. Unity Input System vs Legacy Input Manager conflict when both were active simultaneously.	1. Implement complete engine simulation with RPM calculation, gear shifting (automatic + manual), and torque curves. 2. Add steering with speed-dependent angle reduction and drift mechanics. 3. Develop the checkpoint and lap tracking system for race progress. 4. Create car selection (garage) UI with 3D car preview and previous/next cycling.

Supervisor's Feedback:

Supervisor Name & Signature: Er. Saroj Giri _____
